ANISON TECHNOLOGIES

Anison Technologies specializes in enterprise data engineering, cloud modernization, and analytics solutions for federal, state, and local government agencies. Leveraging the extensive experience of its technical teams, the company delivers hands-on execution in complex, mission-critical data environments where security, compliance, and reliability are non-negotiable. This execution enables Anison to modernize legacy systems into secure, scalable data platforms that reduce operational risk and support confident, data-driven decisions.

CORE COMPETENCIES

Enterprise data engineering & integration: Designs and maintains secure, high-volume data pipelines that unify siloed systems into a single, reliable source of truth for mission-critical operations.

Cloud data migration & modernization: Moves legacy systems to secure, scalable cloud environments while reducing technical debt, improving performance, and maintaining operational continuity.

ETL / ELT development & optimization: Builds and optimizes efficient data workflows that ensure accurate, timely data processing to support analytics, reporting, and operational decision-making.

Business intelligence & analytics reporting: Transforms complex data into clear, actionable dashboards and reports that improve visibility, accountability, and executive decision support.

Data governance, quality & metadata management: Implements governance frameworks that improve data accuracy, compliance, audit readiness, and trust across enterprise systems.

DevOps automation & platform monitoring: Automates deployment and monitoring to increase system reliability, reduce downtime, and accelerate delivery in regulated environments.

Systems integration & application: Ensures seamless interoperability and ongoing support across enterprise applications, databases, and third-party platforms to sustain mission operations.

COMPANY DATA

Legal Name:
Anison Technologies LLC
Address:
12713 Rustic Rock Lane
Beltsville, MD, 20705
UEI: N2P3ZLJQJUC8
CAGE: 9JGB4

PAST PERFORMANCE

Transportation Security Administration (TSA) – Secure Flight Program
Data engineering, ETL, and enterprise integration supporting large-scale passenger screening systems. Improved accuracy, processing efficiency, and system stability.

Federal Deposit Insurance Corporation (FDIC)
Engineered and integrated high-volume financial data pipelines supporting regulatory analysis, reporting, and risk oversight within strict governance and audit-controlled environments.

U.S. Department of Agriculture (USDA)
Delivered data engineering and analytics solutions that improved processing, integration, and reporting of large-scale agricultural datasets supporting federal program oversight.

Centers for Medicare & Medicaid Services (CMS)
Supported Medicare data systems through secure data integration and analytics, improving data quality, compliance, and reporting accuracy in highly regulated healthcare environments.
